Referring Veterinarian: May Ann Jo Reyes Clinic Name: D&R Dog and Cat Clinic
Address: De Venecia Highway, Banaoang, Calasiao, Pangasinan
Contact Nos.: (075) 637 8474 / 0922 657 6611

Client Name: Maricel Sunga Contact No.: 0917-917-8722
Address: #334 Sitio Cabuaan Doyong, Calasiao, Pangasinan
Patient Name: Prince Age: 15 Sex: Male
Breed: Shih-Tzu

Summary of Patient's Medical concerns:

April 29, 2023 - He was brought to our clinic for skin check up. Upon physical exam, coughing was observed. No cracking sound upon auscultation and apparently patient was active with no other clinical signs. Had a history of ticks and vaccine is not up to date.
Owner opted CBC, CHW test and cellophane test but refused a 4way test (Ehr, Ana, Bab, Chw) which result showed an above the normal range of wbc and granulocyte, negative canine heartworm test and positive malassezia infection.

May 6, 2023 - For follow-up check-up according to the owner, an improvement showed with coughing (lessen). During the physical exam, auscultation was conducted with a result of no cracking sound and skin condition had improved.
Cbc result showed lymphocyte above the normal values.
We suggest that if no improvement within 1 week, a 4way test and Xray will be conducted.

May 14, 2023 - Dated for follow-up check-up. As per the owner, coughing was slightly improved compared last week and apparently patient is still active.
Owner opted for a 4way test and undecided still with the Xray.
4way test (Ehr, Ana, Bab, Chw) result showed positive for Anaplasma and Ehrlichiosis.
Provided blood parasite treatment.

May 28, 2024 For follow-up check-up for CBC monitoring, CBC result showed low mchc.

July 14, 2023 - He was brought to our clinic for an ear check-up and limping left hindlimb with clinical signs of redness on both ear and more ear discharge.
Was tested for ear swab and cellophane test, results showed negative ear mites and positive malassezia infection.
Note: For xray.

July 19, 2023 Owner went to our clinic due to irritation and redness on both ear.

August 10, 2023 - Owner went to our clinic with concern that both ears still have an infection but dog wasn't brought.

Note: Owner didn't buy the ear drop we prescribed instead she bought Polycin ear drop.

April 27, 2024 - He was brought to our clinic with the clinical signs of persistent coughing, patient still active and no other clinical signs.

Auscultation was conducted, no cracking sound.

Cbc result showed below the normal values wbc, granulocyte, rbc, hgb, mchc, and platelet count is low.

Microfilariae tested negative.

Provided blood parasite treatment.

Diagnosis: Recurrent Blood Parasite.

May 15, 2024 For follow-up check-up and did not attend on the exact date.

According to the owner coughing improved and sometimes no cough at all.

Cbc was all in normal values.

June 6, 2024 For follow-up check-up.

Client concern was coughing (everyday). We suggest an Xray to the owner. Decided to observe it temporarily and if no improvement within 1week, an Xray will be conducted.

June 12, 2024 Xray result showed VHS 11.1

Canine heartworm test kit tested negative.

Diagnosis: Canine Dilated Cardiomyopathy

Note: Follow-up Xray on July 12, 2024 for VHS monitoring.
